

Anticipate and stop threats with security built for SMB

Supercharge your security with AI-driven defense

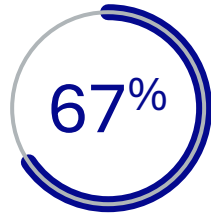

Rising threats, dispersed security, limited resources

The mass adoption of cloud and digital estates makes managing security difficult for small and medium-sized businesses (SMBs). Attackers know that many companies are challenged by fewer resources, tighter budgets, and less time to manage security. Additionally, cybercriminals are now using AI to deliver malware. This reality has led to sophisticated cyberattacks becoming more frequent and targeted.

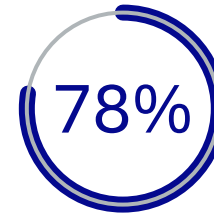

Disconnected tools, nonstop alerts, and limited staff have created fatigue that slows responses and increases risk. Meanwhile, insurance and compliance requirements demand ongoing attention. For many companies, keeping up with these layers of threats feels overwhelming.

83% of SMBs believe AI has raised the cybersecurity threat level¹

67% of all phishing utilizes some form of AI²

78% of SMBs are concerned that a cyberattack could put them out of business³

Manage less, protect more

To simplify security solutions, many businesses are replacing multiple security products with a unified one. A single comprehensive solution for SMBs is easier to manage, more cost-efficient, and delivers greater visibility across your environment.

With a unified platform, you can predict, prevent, detect, and respond using integrated tools that protect identity, devices, cloud, email, and networks—all while cutting costs. Built-in tools and fast detection free IT from chasing alerts and managing dashboards, keeping them focused on running and growing your business.

Transform your security with AI-powered tools

Optimize, predict, detect, and remediate threats

Modern security operations with unified platform (SMB) offers the most comprehensive, leading class of security products in the industry for cybersecurity, compliance, identity, and management for different skill levels. Agentic AI capabilities help manage threats at scale with automated and integrated tools that help prevent, detect, and respond to cyberattacks before they impact your business.

With AI-powered tools from Microsoft security, designed for SMB, IT teams can:

Prevent threats with end-to-end protection

Detect emerging threats across data

Predict attack paths and prevent breaches

Rapidly remediate threats with AI

Prevent threats with end-to-end protection

Save time and energy and cut costs consolidating operations and automating routine tasks.

Modern security operations with unified platform (SMB) offers the next step in security protection that extends endpoint safeguards to also cover email, identities, cloud apps, and more in one solution.

Enhanced threat detection and automated workflows help close security gaps and quickly identify threats. AI-powered insights give clear recommendations without the overhead of manual work and juggling disconnected tools. Most importantly, your team stays focused and effective, with strong protection on a platform built to do more with less across the full lifecycle of threats.

cost savings by consolidating a solution to Microsoft⁵

5. The Total Economic Impact™ Of Microsoft Defender, A commissioned study conducted by Forrester Consulting, June 2025.

Predict attack paths

Identify and close gaps and blind spots before problems arise using proactive exposure management.

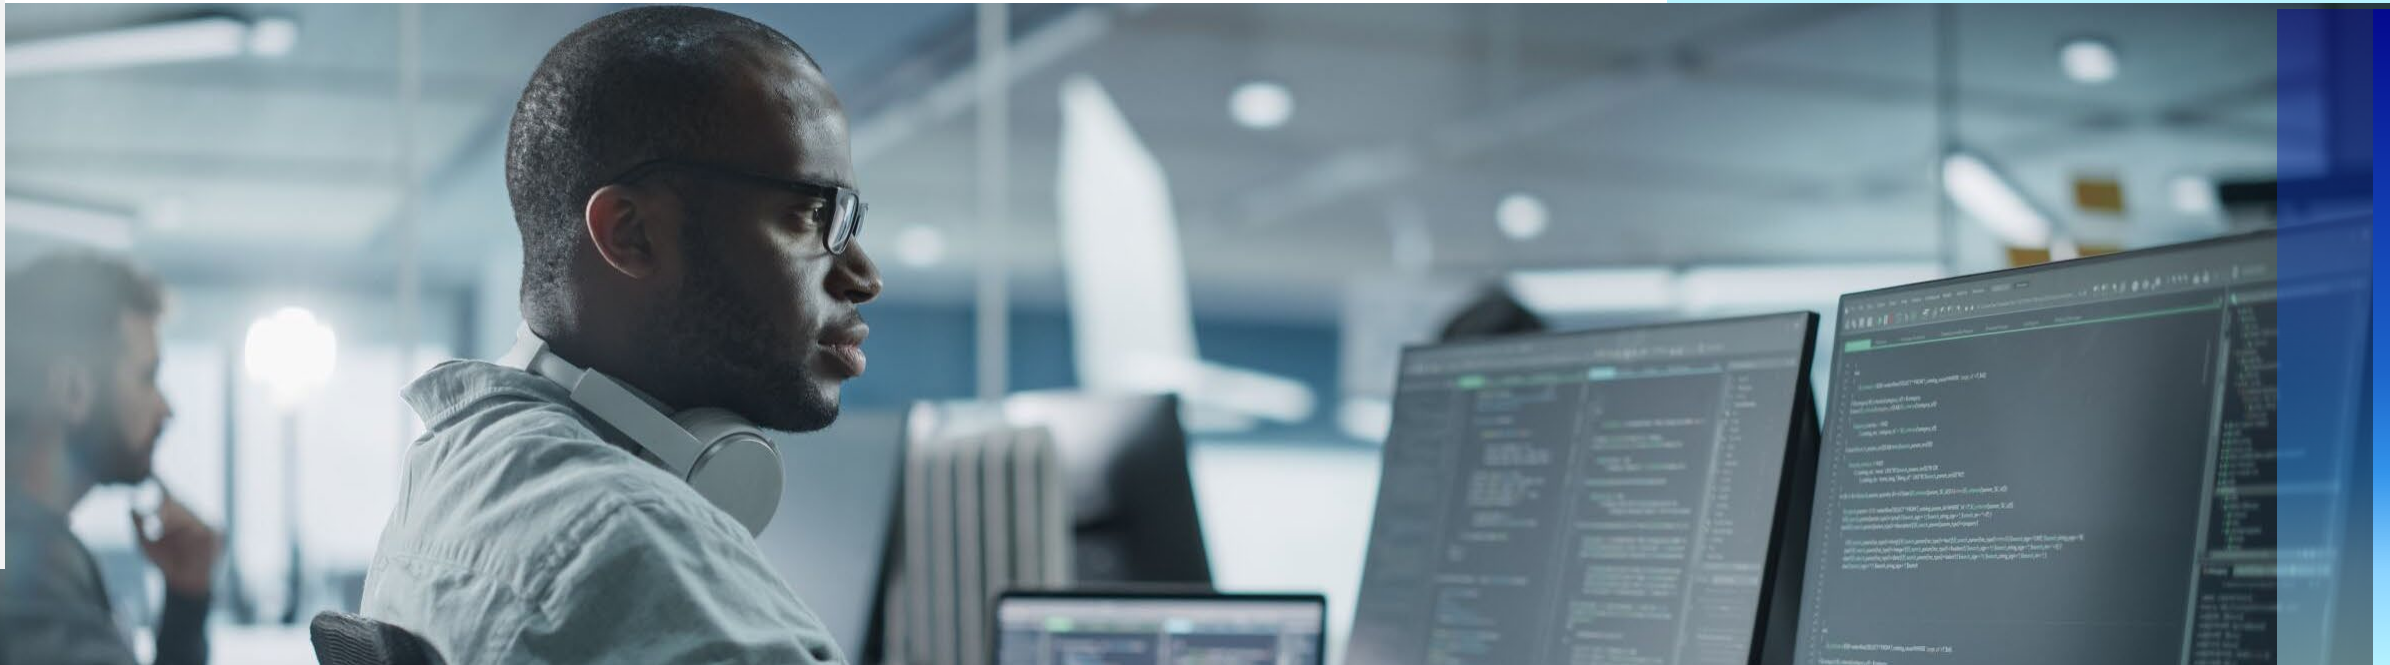

AI-powered tools from Microsoft security, designed for SMB, empower you to understand, measure, manage, and improve your security across devices, identity, apps, data, and the cloud.

Prevent attacks across your estate by accessing threat-intel-driven insights. Monitor security controls and identify potential attack paths with high visibility. The platform helps you connect the dots between isolated security incidents to predict attacks and limit vulnerability.

Detect emerging threats

Catch threats quickly with AI-powered detection.

Modern security from Microsoft, designed for SMB, uses AI tools that help you stop active threats like ransomware, business email compromise, and interception attacks in as little as three minutes!

The platform targets attacks with proactive, intelligence-driven defense that automatically triggers detections. An AI-powered workspace helps you quickly investigate issues without switching between tools, so you can resolve issues in one place.

To stop threats, the platform coordinates defense and detects attacks across identities, devices, cloud apps, email, and networks with complete visibility into every stage of an attack.

Conclusion

Modern security operations with unified platform (SMB) offers SMB organizations an extremely robust integrated platform, powered by AI, automation, and global threat intelligence.

Anticipate and disrupt attacks

Reduce complexity

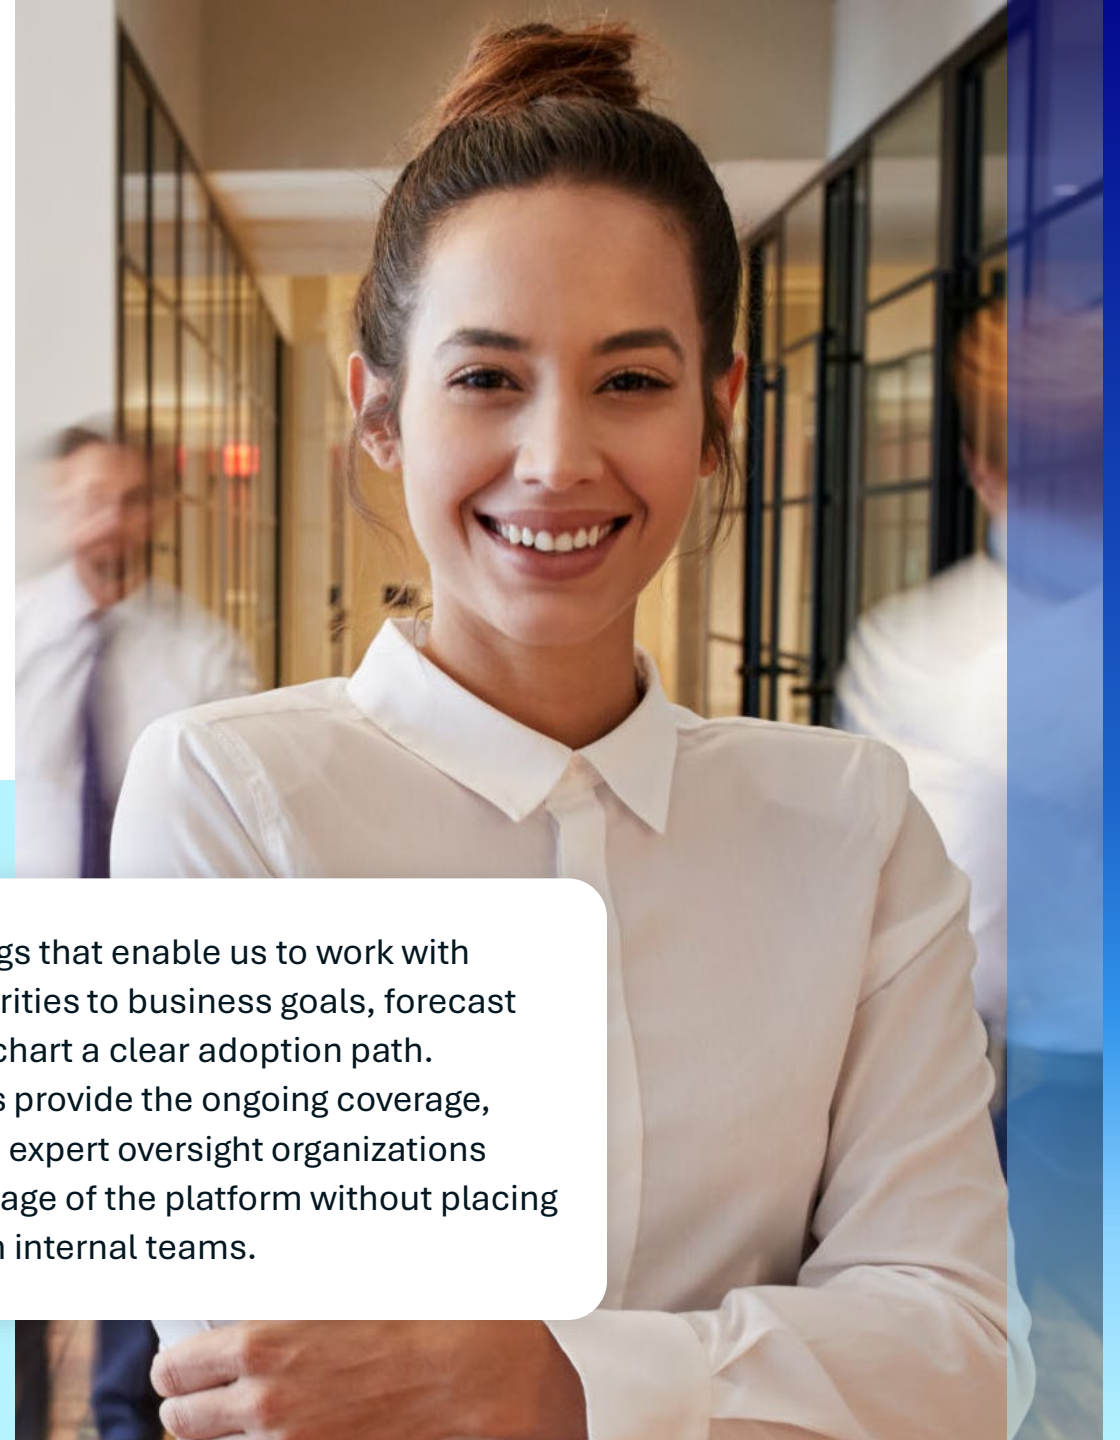

Move from reactive decisions to proactive

Automate processes

AVTech adds exceptional value in helping organizations capture these security benefits at scale. We bring proven expertise in fast deployments, seamless integration, ongoing protection management, and cost-effective security services.

We offer Immersion Briefings that enable us to work with leaders to link security priorities to business goals, forecast return on investment, and chart a clear adoption path. Customer security services provide the ongoing coverage, advanced capabilities, and expert oversight organizations needed to fully take advantage of the platform without placing unsustainable demands on internal teams.

Microsoft 365 Consultants for Australian Business

As a Microsoft partner, we're ready to help you defend your business against cyber threats. We have a robust security practice, along with the expertise you need to assist you with every stage of your journey. We can provide an assessment of your current environment and identify the gaps as well as help you implement and deploy the right security solutions tailored for your unique business needs.
